IBM Canada Ltd.

Recruitment Team

Toronto, ON

Dear Hiring Manager,

I am writing to apply for the Associate Developer position at IBM. IBM is well known for building solutions that power everyday aspects of society. From financial systems to transportation networks, IBM develops meaningful large-scale solutions that I hope to contribute to early in my career. As a computer engineering student at York University with experience in full-stack deployment and system design, I believe that I can contribute meaningfully to IBM's projects from day one.

At Appli AI, where I am working as a Software Developer, I develop and design back-end API endpoints as well as design and implement useful features on the front-end in an AI-powered hiring platform. Working at Appli AI has allowed me to apply my software development skills in a professional environment, from requirements design to deployment and user experience. This experience aligns well with IBM's requirement that associates be able to work in both front-end and back-end environments. My familiarity with JavaScript and experience working across the full software development lifecycle align directly with IBM's stated technical requirements for this role.

I am a strong believer in continuous learning. I am currently completing my second year of engineering at York University. As a future engineer, I am committed to continuously learning and staying updated with new technologies. IBM's associate program emphasizes growth and independent project ownership, which is precisely the type of environment in which I hope to grow professionally. I would welcome the opportunity to further discuss how my technical skills and software development experience align with IBM's Associate Developer role. Thank you for your time and consideration.

Sincerely,

Ariyan Azami
